

SUMMARY

Undergraduate Bioengineering student with hands-on research experience in clinical microbiology, mammalian cell culture, and bioinformatics. Skilled in bacterial culturing, diagnostic assays, and antibiotic resistance profiling through intensive internship training. Designed a Python-based DNA analysis platform for transcription, translation, and mutation detection, reinforcing a strong foundation in genetic and molecular biology. Detail-oriented, adaptable, and collaborative, with proven strengths in experiment documentation, troubleshooting, and scientific communication. Shared a great interest in stem cell and disease research.

EDUCATION

University of California, Berkeley Bachelor of Bioengineering De Anza College Associate of Bioengineering Honors: Student Athlete of the Year, Dean's List (2023-2025) GPA: 4.0/4.0 Relevant coursework: C++, Linear Algebra, Organic Chemistry, Data Abstraction, Physics for Scientists and Engineers, Statistics.	<i>Berkeley, California</i> <i>August 2025 - July 2027</i> <i>Cupertino, California</i> <i>September 2023 - July 2025</i>
---	--

SKILLS

Technical: Culture, Micropipetting, MIC Assays, Antibigrams, Gram/Ziehl–Neelsen Staining, Python, MATLAB, C++, Scientific Reporting, SolidWorks (CAD), Statistics
Interpersonal: Leadership, Problem-Solving, Detail-Oriented, Strategic Thinking, Adaptability, Communication skills, Teamwork.

WORK EXPERIENCE

Nam Khoa Biotek Company <i>Microbiologist Intern</i> - Executed 100+ clinical diagnostics, including Gram and Ziehl–Neelsen staining, TB screening, and Streptococcus testing for childbirth safety, followed by targeted antibiograms and microscopy. - Performed high-throughput antibiotic susceptibility testing (antibiograms), MIC assays, and S. aureus virulence profiling on ~30 patient samples daily, delivering results that guided urgent hospital treatment decisions. - Applied diverse cell culture techniques across blood, lung fluid, and other patient samples, preparing specialized media (e.g., H. pylori-selective) tailored to pathogen profiles. - Streamlined workflows and upheld quality control during staff shortages, reducing turnaround time by 30%, while collaborating with a four-member team to inspect samples, perform antibiograms, and draft preliminary reports.	<i>Ho Chi Minh City, Viet Nam</i> <i>June 2024 - Aug 2024</i>
---	--

RESEARCH EXPERIENCE

Wellspring Saigon Bilingual School <i>Student Research - Evaluating Antioxidant Activity of Allium sativum (Clove and Germ)</i> - Collaborated with a peer under faculty supervision to evaluate antioxidant properties of garlic clove and germ across five solvent systems. - Prepared extracts via batch extraction and rotary evaporation (yield: 3.12%–6.63%) and conducted DPPH assays at 517 nm to measure antioxidant capacity. - Identified ethanol-extracted germ as the most potent (IC₅₀ = 385.4 µg/mL) and confirmed superior performance across all solvents through linear regression analysis.	<i>Ho Chi Minh City, Viet Nam</i> <i>August 2020 - June 2021</i>
---	---

PROJECT

DNA Translation & Mutation Detection Tool (Github) Developed a Python-based bioinformatics pipeline integrating BioPython and custom functions to process DNA sequences, including strand cleaning, mRNA transcription, codon translation, and protein assembly. Implemented a mutation-detection feature to identify the β-globin E→V substitution linked to sickle-cell anemia, strengthening computational biology skills and deepening interest in therapeutic gene-editing.	<i>August 2025</i>
---	--------------------

LEADERSHIP & ACTIVITIES

Rainbow Spring Charity Club <i>Vice President</i> - Raised over \$4,000 through events—including a \$3,000 fundraising concert—to build two school libraries in Ma Da, Dong Nai, with surplus used to purchase books. - Facilitated communication between departments and negotiated with school boards to establish club independence and long-term sustainability.	<i>Ho Chi Minh City, Viet Nam</i> <i>Jan 2021 - Dec 2022</i>
